

Salmate[®]

- natural source of ω -3 polyunsaturated fatty acids (PUFAs) - EPA and DHA
- high content of emulsified fish oil - 45% stabilized with natural antioxidants which allows low dosage
- produced by spray drying - a unique matrix of modified starch ensures trouble free feed intake and strong by-pass effect

DOSAGE:

30-50 g/cow per day in the first third of lactation

Exact application to the TMR is necessary to establish after consultation with nutrition specialist.

EFFECT:

- EPA and DHA passes through the rumen undegraded
- unique emulsification greatly increases the absorption of ω -3 polyunsaturated fatty acids in the small intestine
- EPA and DHA support production of progesterone and simultaneously suppresses production of prostaglandin
- significantly reduces embryonic mortality and thus increase the percentage of pregnant cows
- increases daily milk yield while maintaining levels of milk fat and milk protein
- verified in large farms in Europe and the Czech Republic
